Summary

Full-Stack (MERN) and AI Developer with strong command over Java and Data Structures. Built scalable RESTful APIs, concurrent backend systems, and AI-powered applications with emphasis on clean design and system reliability. Backed by solid Computer Science fundamentals and problem-solving skills.

Education

Jain (Deemed-to-be) University, Bengaluru

2023 – Present

B.Tech in Computer Science and Engineering (Artificial Intelligence)

CGPA: 9.35 / 10.0

Technical Skills

Languages: Java, JavaScript

Full Stack: React.js, Node.js, Express.js, REST API Development, FastAPI

Databases: MongoDB, MySQL, PostgreSQL

Core CS: Data Structures and Algorithms, OOPs, DBMS, Operating Systems, Computer Networks, Concurrency, System Design Basics

Artificial Intelligence: NLP, Transformer Models (BERT, T5), RAG, Langchain

Tools: Git, GitHub, Docker, Vercel, Render, Linux, Postman, VS Code, IntelliJ IDEA

Projects

AI Interview Intelligence Platform

LLM ,MERN Stack

[GitHub Link](#)

- Developed full-stack AI platform that analyzes resumes and generates personalized interview preparation roadmaps.
- Built NLP pipeline for skill extraction and semantic similarity evaluation using transformer embeddings.
- Designed modular RESTful APIs with optimized MongoDB schemas for session tracking and feedback analytics.
- Implemented mock interview engine with automated response scoring and structured evaluation logic.

JiraLite – Agile Project Management Platform – [Live Demo]

MERN Stack, Rest API

[GitHub Link](#)

- Built a Jira-inspired Agile project management platform with Kanban workflows, sprint-based task tracking, and collaboration features.
- Implemented secure JWT authentication, protected routes, role-based task ownership, and scalable RESTful APIs with MongoDB.
- Deployed full-stack application using Vercel, Render, and MongoDB Atlas .

Secure Distributed Code Execution Engine

Node.js

[GitHub Link](#)

- Engineered containerized sandbox to securely execute untrusted multi-language user code using Docker isolation.
- Enforced CPU and memory constraints with execution time monitoring to prevent resource abuse.
- Designed asynchronous job queue architecture to handle concurrent execution requests.
- Implemented automated test-case validation system with structured execution result reporting.

Distributed In-Memory Key-Value Store

Java, Concurrency

[GitHub Link](#)

- Designed thread-safe in-memory key-value store supporting O(1) SET and GET operations.
- Implemented LRU eviction and TTL expiration mechanisms for efficient memory management.
- Built multi-threaded TCP server to handle concurrent client connections.
- Integrated write-ahead logging and snapshot-based persistence for crash recovery.

Achievements

- Solved **250+ Data Structures and Algorithms** problems across coding platforms
- Completed Graph Theory & Dynamic Programming Camp by **AlgoUniversity**
- Selected for **Caterpillar – Inside the Machine 2026**, ranking among Top 5 students in the university.
