SUMMARY

Backend, Full-Stack, and AI Engineer with strong foundations in Data Structures, Algorithms, and scalable system design. Experienced in building MERN applications, REST APIs, and AI-powered systems using LLMs, NLP, and RAG, with a focus on backend engineering and problem solving.

EDUCATION

Jain (Deemed-to-be) University, Bengaluru

2023 – Present

B.Tech in Computer Science and Engineering (Artificial Intelligence)

CGPA: **9.35 / 10.0**

EXPERIENCE

Backend & AI Engineering Intern

Jun 2026 – Aug 2026

Ocular Intelligence

Remote

- Developing backend systems and AI-powered solutions for production-oriented applications.
- Building scalable REST APIs, integrating AI workflows, and improving system reliability and performance.
- Collaborating with engineering teams to develop modular and maintainable software systems.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript

Backend/Full Stack: Node.js, Express.js, React.js, FastAPI, REST APIs

Databases: MongoDB, MySQL, PostgreSQL, Supabase

Core CS: Data Structures & Algorithms, OOPS, DBMS, Operating Systems, Computer Networks, Concurrency, System Design(Basics)

AI/ML: LLMs, NLP, RAG, LangChain, LangGraph, Transformer Models (BERT, T5)

Tools/Deployment: Git, GitHub, Docker, Linux, Postman, Vercel, Render, MongoDB Atlas

PROJECTS

JIRALITE – AGILE PROJECT MANAGEMENT PLATFORM [Live Demo]

MERN Stack

GitHub Link

- Built a Jira-inspired project management platform with sprint tracking, Kanban workflows, and collaboration features.
- Implemented JWT authentication, protected routes, and scalable REST APIs using MongoDB.
- Deployed full-stack architecture using Vercel, Render, and MongoDB Atlas.

AI INTERVIEW INTELLIGENCE PLATFORM

LLM, MERN Stack

GitHub Link

- Built an AI-powered interview preparation platform that analyzes resumes and generates personalized learning roadmaps.
- Developed NLP pipelines using transformer embeddings for skill extraction and semantic evaluation.
- Designed scalable REST APIs and MongoDB-based backend for feedback tracking and mock interview scoring.

SECURE DISTRIBUTED CODE EXECUTION ENGINE

Node.js, Docker

GitHub Link

- Engineered a secure containerized sandbox to execute untrusted multi-language code using Docker isolation.
- Implemented CPU, memory, and execution-time constraints to prevent abuse and improve reliability.
- Designed asynchronous job queue architecture for concurrent execution and automated test-case validation.

FINCA – AGRICULTURAL TRACEABILITY PLATFORM [Live Demo]

Blockchain, FastAPI

- Built a blockchain-inspired agricultural supply chain platform enabling tamper-resistant product traceability.
- Implemented cryptographic hash linking and batch-level validation for secure supply chain tracking.
- Developed FastAPI backend and interactive chain visualization for real-time verification and transparency.

ACHIEVEMENTS

- Solved **250+ Data Structures and Algorithms** problems across coding platforms.
- Completed Graph Theory & Dynamic Programming Camp by **AlgoUniversity**.
- Selected for **Caterpillar – Inside the Machine 2026**, ranking among Top 5 students in the university.
